

TPEC wins bid with **Norris Square Civic Association**

TPPEC began work in November at the former St. Boniface Church Complex in the Kensington section of Philadelphia. We were selected from a group of 11 environmental firms to provide environmental investigative and remediation services. Norris Square Civic Association (NSCA) is planning to bring a new life to the mostly vacant property, and we at TPEC are pleased to be part of the process.

Norris Square Civic Association is a grassroots, community-based development corporation dedicated to the revitalization of the neighborhood and the empowerment of its residents. For more information on their community efforts, visit their website at www.nascaonline.org.

Engineering Design for a Reduced Stormwater Bill

TPPEC is providing engineering design services to substantially reduce the stormwater fees for a solid waste management and recycling facility in North Philadelphia. A combination of site engineering, stormwater management, and construction of a green roof will be employed at the 13.2-acre site in order to qualify the property for stormwater credits with the Philadelphia Water Dept. ❄

A message from our President ~

We at Trans-Pacific Engineering Corporation are dedicated to providing you with a customer-centered approach and competitive rates ensuring that your project is on time, your liability is minimized, and you receive the maximum return on your environmental investment.

Warmest wishes for the holiday season,
Philip C. Chiang, P.E.

**Celebrating 18 Years
In Business!**

Did you know?

TPEC is a Small Business Administration (SBA) 8(a)-certified firm

and we are happy to support any of your 8(a) project needs! If you are seeking a firm to partner with to support your company's growth, please contact Mr. Philip Chiang, P.E. at (215) 659-2490.

New Stormwater Charges Are In Effect

Beginning on July 1st, 2010, the Philadelphia Water Department began implementing the four-year phase-in of their new system for billing stormwater charges to commercial property owners in the City.

Looking to reduce your stormwater fees?

TPEC can help you:

- * Verify your bill is calculated accurately
- * File appeals to correct property data
- * Determine your eligibility for stormwater credits
- * Design improvements to gain stormwater credits

Providing Engineering Expertise to the Philadelphia Water Department

Since 1997, TPEC has been actively involved in upgrades at eight PWD facilities.

Six of our watershed planners, designers, and engineers currently work onsite at the PWD Office of Watersheds.

Together with such firms as AECOM, Whitman, Requart & Associates, and Camp, Dresser & McKee, we have provided the PWD with:

- Security system upgrade design including perimeter fencing, centralized parking, site lighting, and roadways;
- Stormwater management design including retention basins, water pumping stations, and underground water storage systems;
- Civil site engineering for new Gravity Thickener facilities;
- Design-build services for a Thermal Drying Facility at the Biosolids Recycling Center;
- Southeastern waterway restoration services including water quality/ecological assessment, review of stormwater management practices, and restoration of degraded stream channels and wetlands. ❄️
